Sacramento River Spawning Habitat Restoration Underway

REDDING, Calif. The Bureau of Reclamation, in partnership with Glenn-Colusa Irrigation District, Western Shasta Resource Conservation District, California Department of Water Resources, and California Department of Fish and Wildlife is preparing to place salmonid spawning gravel in the Sacramento River, immediately below the Anderson Cottonwood Irrigation District Diversion Dam and Market Street Bridge, in Redding.

Beginning the week of Feb. 15, 2016, work is scheduled to take place weekdays between 7 a.m. and 5 p.m., and is expected to be completed around March 18, 2016, weather depending.

The project will place approximately 8,500 cubic yards of gravel into the river to help improve spawning habitat for Chinook salmon and steelhead trout. The project is a continuing effort to help meet requirements of the Central Valley Project Improvement Act to restore and replenish spawning gravel and rearing habitat for salmonid species.

The environmental documents may be viewed at http://www.usbr.gov/mp/nepa/nepa_projdetails.cfm?Project_ID=23758. If you encounter problems accessing the documents online, please call 916-978-5100 (TTY 800-877-8339) or email mppublicaffairs@usbr.gov.

###

Reclamation is the largest wholesale water supplier and the second largest producer of hydroelectric power in the United States, with operations and facilities in the 17 Western States. Its facilities also provide substantial flood control, recreation, and fish and wildlife benefits. Visit our website at <http://www.usbr.gov>.
