

Building the Sites Reservoir

WATER FOR OUR CITIES, FARMS AND WILDLIFE

Location of Proposed Sites Reservoir

Water would be pumped into reservoir from existing canals

The ongoing drought has cost our state billions of dollars of farm production, diminished wildlife habitat and reduced urban water supplies. For our future prosperity, we need to capture water in rainy years through offstream storage to help the state survive future dry years. Every Californian will benefit from the increased water storage and flexible water management that will come from Sites Reservoir.

Benefits:

- **More reliable water supplies** for millions of households, farms, birds and migrating salmon
- **Greater flexibility** to save water during surplus conditions for use during dry periods
- Stores water during the winter to generate **clean and renewable power** for peak summer demands
- Helps recharge **groundwater** supplies
- **Recreational opportunities** including boating, camping, fishing and hiking
